

How to Make a New Texture

Use browser to download a JPEG file into the folder **Pictures**, say named **dog.jpg**.

Enter the command:

```
j Convert dog
```

to convert **dog.jpg** to raw format, named just **dog**.

To use a sub-rectangle of the image, enter the command:

```
j Clipper dog
```

Move and resize the clipping rectangle by pressing keys **l**, **r**, **u**, **d**, **w**, **n**, **t**, **s** as desired (press keys **1**, **2**, **3**, **4** to change the number of pixels used for each of these commands).

When you have the sub-rectangle you want, press **esc** to save it as a new raw format file named **dog-1**.
